🌿 COMPANION PLANTING CHEAT SHEET

A quick-reference guide to naturally boost yields and deter pests.
By GardenWithSerge.com

🍅 The Tomato Team

Heavy feeders prone to pests. Pair carefully!

- 💚 **Basil:** Repels hornworms & improves flavor.
- 💚 **Marigolds:** Deters nematodes in the soil.
- 💚 **Carrots:** Break up soil for deeper roots.
- 🚫 **Keep Away:** Potatoes & Cabbage (attracts blight).

🥒 The Cucumber Crew

Sprawling vines needing beetle protection.

- 💚 **Radishes:** Repels cucumber beetles.
- 💚 **Nasturtiums:** Trap crop for aphids.
- 💚 **Sunflowers:** Natural trellis to climb.
- 🚫 **Keep Away:** Potatoes & Strong Herbs.

🥕 Root Boosters (Carrots)

Need loose soil and protection from maggots.

- 💚 **Onions & Leeks:** Masks the scent of carrots.
- 💚 **Lettuce:** Provides gentle ground cover.
- 🚫 **Keep Away:** Dill & Parsnip.

🌶️ The Pepper Partners

Thrive with humidity and aphid protection.

- 💚 **Spinach:** Living mulch to retain moisture.
- 💚 **Alliums:** Repel aphids and spider mites.
- 🚫 **Keep Away:** Beans (spread too much nitrogen).

🍆 The Eggplant Allies

Heavy feeders needing strong aromatic partners.

- 💚 **Bush Beans:** Repels potato beetles.
- 💚 **Thyme & Catnip:** Deters flea beetles.
- 🚫 **Keep Away:** Fennel (stunts growth).

🌱 The Okra Oasis

Tall shade providers for delicate plants.

- 💚 **Lettuce & Peas:** Plant underneath for shade.
- 💚 **Melons:** Okra provides a sturdy windbreak.
- 🚫 **Keep Away:** Nematode-Prone Plants (Tomatoes).

🍉 The Melon & Watermelon Web

Space hogs that need lots of sun, water, and pollinators.

- 💚 **Corn:** Dappled shade in scorching climates.
- 💚 **Radishes:** Deters cucumber beetles.
- 💚 **Marigolds:** Attract bees for pollination.
- 🚫 **Keep Away:** Potatoes (compete for water).

🌻 The 3 Golden Rules of Companion Planting

1. The Three Sisters: Corn (stalk to climb), Beans (fix nitrogen), and Squash (weed-blocking mulch).

2. Plant Flowers Everywhere: Marigolds, Nasturtiums, and Alyssum attract pollinators and act as pest decoys.

3. Use Strong Scents: Interplant Garlic, Onions, and fragrant herbs to confuse insects.

Is your plant already sick?

Companion planting is preventative. If your plant is already showing signs of disease, don't guess!
